

Login History

Login history tracks all the different times a user has logged in (both the primary user and the alternative user - the email indicates which). SeTLS is designed to leave a user logged in, so multiple locations can be logged in at once (ie a member may be logged in on their phone, and their home computer at the same time, and even different browsers within that same computer).

Security note:

If you suspect an admin account has been compromised (ie a committee member has had their phone stolen, there has been a break in at your toy library and your devices do not require a password to unlock), use the "REMOTE LOGOUT ALL" button as soon as possible. This will log the user out from all locations, however, if the device has saved passwords, the outsider may be able to log back in again quickly. For more on steps for securing your database please follow this guide.
