Add/edit list of pieces

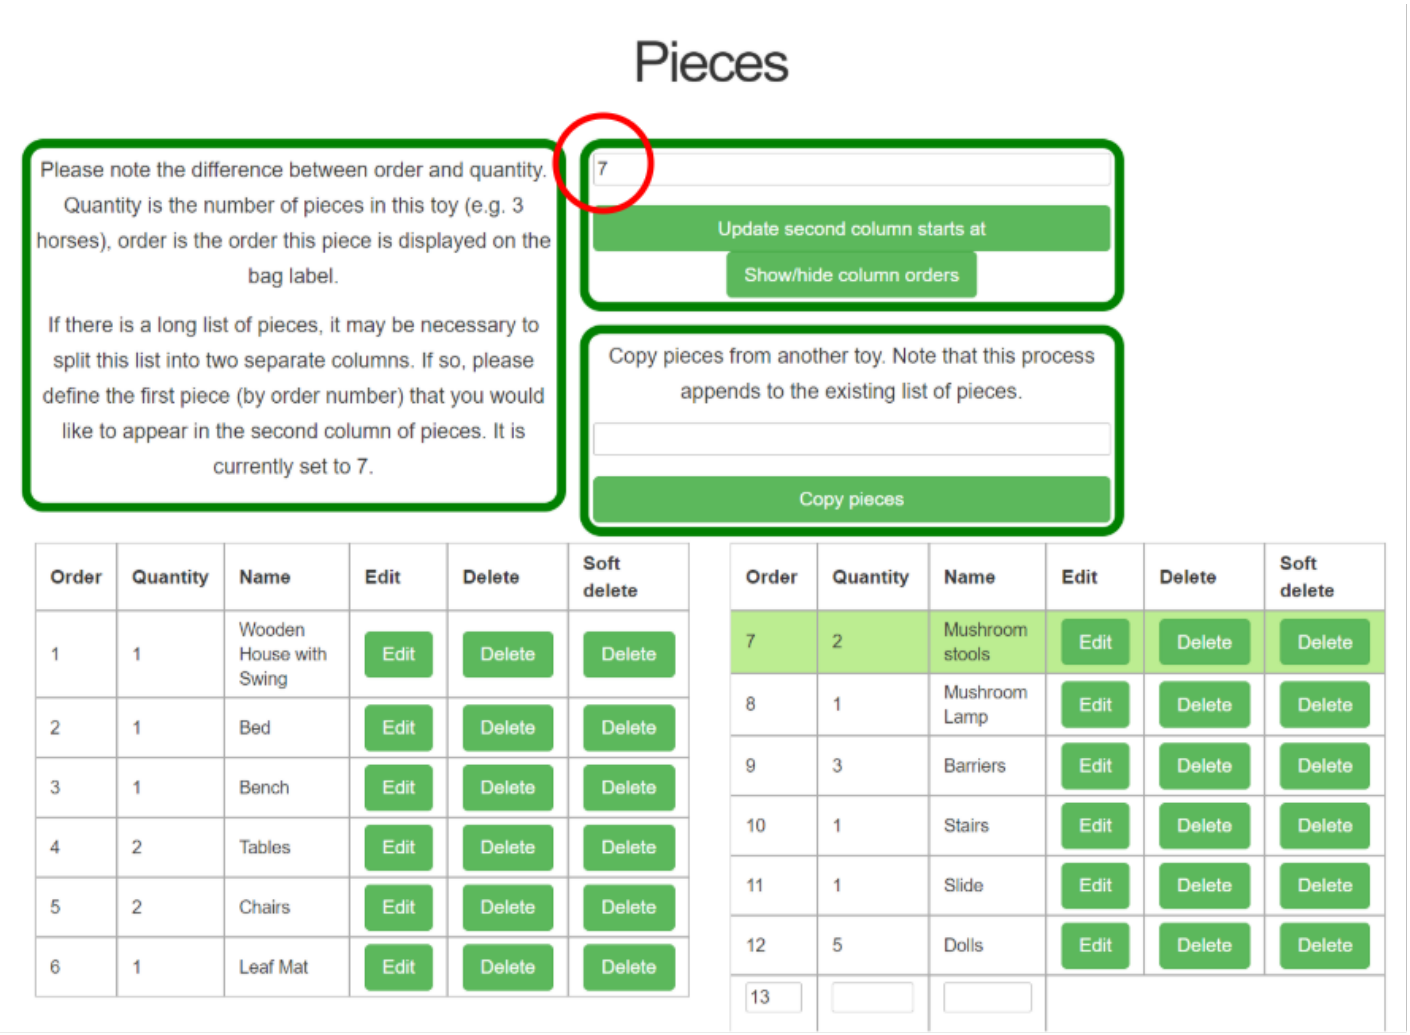

Adding

To add new pieces, simply fill in the quantities and names of the pieces, and make sure to press the green "Add pieces" button at the bottom of the page to save.

Columns

If your toy has a large amount of pieces, it may be easier to read (and print better on your bag label) if you split your pieces list into two columns. This can be done using the "Update second column starts at" box and entering the order number of the piece you'd like to be at the top of the second column. To reset back to 1 column, simply leave blank and press update.

Deleting

Soft delete means the piece line will be removed from the list (and won't show either on the toy or bag label), but can be "undeleted" from the soft deleted pieces tab. If you have a missing piece, soft delete will be the only option for that piece line, as a true delete completely wipes the data.
