Edit Toy

This page has a range of options which can be turned off or on via your Toy Library Settings Page.

The configuration for most of these settings come from the fields under the "Toys" tab, unless noted otherwise.

Toy library ID - see more on Toy Library ID here.

Feature toy - makes the toy visible in the Feature Toys page (if you have feature toys turned on in toy library settings).

Locations

SeTLS comes preloaded with the following locations

- I (In Library)
- M (Missing) - this means missing a critical piece and is the location toys are sent to when a piece is reported missing and the "this piece is important" option selected. More on missing pieces here.
- D (Deleted)
- O (On Loan) - this location cannot be edited manually, toys must be loaned or returned to change to or from On Loan.

Additional locations: If Click and Collect, or Quarantine modes are turned on, this will generate additional locations.

Custom locations can be added through the Toy Locations page.

Bag label text - this is publicly viewable when looking up a toy online. Some toy libraries use this for describing the toy, adding care instructions, etc.

Item alerts - these are only visible to admin or login levels that have "view alerts" enabled. A full list of current alerts can be found at Toys/private comments.
